

Workflow Manager

Organize your lab processes with an intuitive graphical flowchart designer. Workflows can be made with a combination of automatic steps, allowing you to manipulate single samples or batches like microplates. Individual workflows can be joined in tandem to make the process even more streamlined.

Rich Features

- Workflows can be shared or restricted to specific teams of operators
- Assign individual steps to operators/users
- Monitor task progress and timing
- All steps are linked to LabCollector modules including data storage, modifications and documents
- Powerful storage tracking system to keep track of reagents, lots and sample location
- Instrument and sample sheet exports
- Automatic data acquisition from instruments or third-party software, and automatic calculations
- Workload dashboard and Gantt view of work progress
- Complete electronic batch reports (EBR) report generation

Fully customizable

- Use a graphical template creation system to give step-based work instructions to operators
- Multiple options for detailed steps
- Many possible combinations of nodes and connections

Compliance

- Electronic signature and password authentication
- CFR21 part11/GxP compliant audit trail system
- Step verification and stage validation
- Recording of deviations or non-compliant samples/procedures
