

# SEQUENCING SERVICE MANAGER

LabCollector LIMS Add-on

## Management of a sequencing service from orders to results

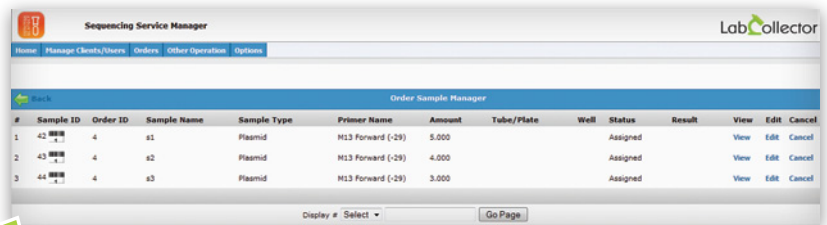

From Sanger sequencing requests...

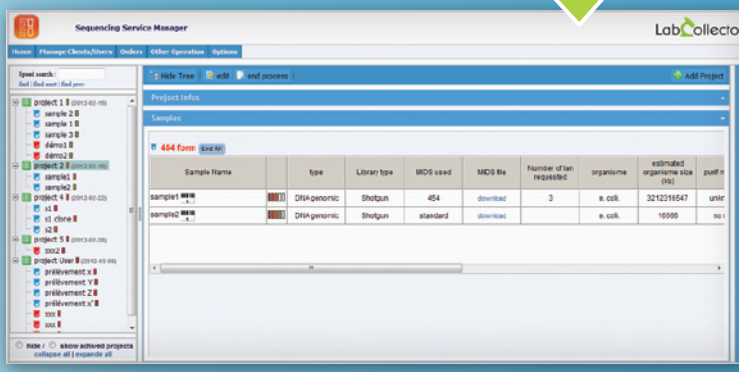

SSM is a network based system that enables labs, core facilities, biotech company and others to manage easily all sequencing requests.

SSM includes a web interface allowing clients to place orders and download results. They keep an eye on progress.

SSM is fully configurable: store primers, pre-ordered sequencing credits with barcode labels and samples to plate assignments.

... to Next Generation Sequencing (NGS) methods

With the SSM for NGS services management you can define projects with unlimited samples and steps to follow your day-to-day tasks.

This tool is fully customizable and can be adapted to any NGS methods (454, IonTorrent ...) that will be used.

Fully integrated with **LabCollector LIMS:**  
a collaborative database for life sciences
