

Query Builder

Query Builder allows you to generate reports on your data. With Query Builder you can use the links you've made between records in different modules to track the connections.

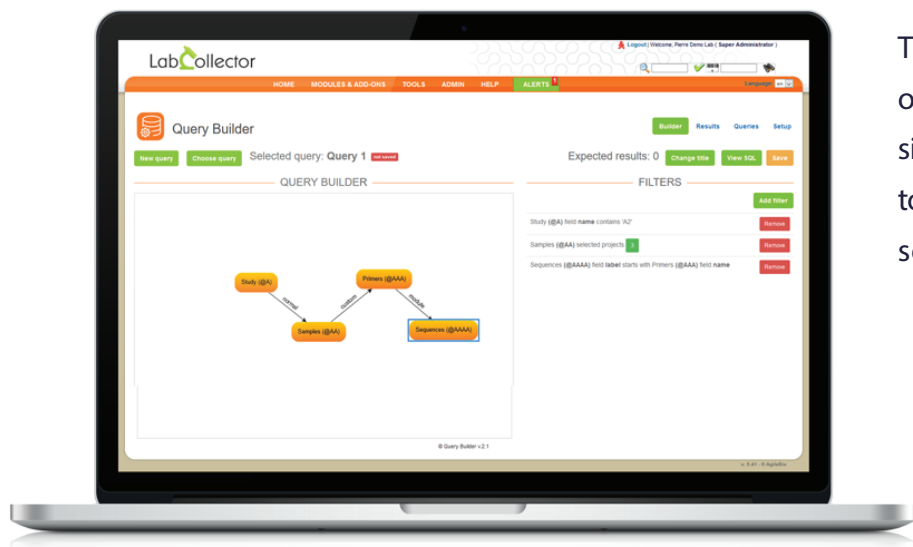

Features

- Build your queries using a graphical display
- Filter by value, by module or by project code
- Save and share queries with groups or individuals
- Export results by CSV or Excel
- View SQL code
- Generate a URL for each query for use in external dashboard software.

Remote URL

http://localhost/dev/extra_modules/query_builder/api/index.php?action=runQuery&uid=5&token=ej8aRQGh3OrP87oC8h6k1NOZjbFQOIal

Refresh Close

The Query Builder reporting tool makes use of links and filters to extract your data in a few simple steps. After that you have the freedom to export into a data visualization software and see your data come to life.
